

Auto Changeover Gas Regulator Kit

The Auto Changeover Gas Regulator Kit is designed to connect two gas cylinders and can supply gas to one or two Christie CC2/G-V2 cooktops. The auto changeover regulator reduces the gas supply pressure from 700-1300kPa to 2.75kPa nominal gas pressure to the cooktop. The auto changeover function automatically switches the supply between gas bottles when one bottle runs empty.

Kit for 1 x cooktop

Kit for 2 x cooktops

Christie gas appliances can be specified for operation with reticulated natural gas (NG) or liquid petroleum gas (LPG) supplied via gas cylinders. When LPG is selected, the Auto Changeover Gas regulator is necessary to provide the correct nominal supply pressure to the cooktop. It can also be connected to one or two cooktops.

The auto changeover function means the gas supply will not be interrupted when one bottle is empty. It also provides a visual indicator to identify when an empty bottle needs to be changed.

- Kit applicable for liquid petroleum gas (LPG) only for use with common gas bottle sizes
- Auto pressure regulation and changeover function
- Suitable for the Standard or Large Modular Series Cabinets with a Gas Bottle Door option

SPECIFICATIONS:

- 400MJ Dual Stage Regulator with automatic change over function
- 2 x copper pig-tails for connection gas cylinders
- 1 or 2 x 6 mm PVC gas hoses for connection to the CC2/G-V2 cooktop
- Simple and easy to install, with supplied mounting bracket
